DATE MAILED: 07/19/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

10/722,467

Applicant(s)

DU MESNIL ET AL.

Examiner

Leonard M. Williams

Art Unit

1617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 28 November 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 12-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 12-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Detailed Action

***Priority***

This application appears to be a division of Application No. 10/234381, filed 09/05/2002. A later application for a distinct or independent invention, carved out of a pending application and disclosing and claiming only subject matter disclosed in an earlier or parent application is known as a divisional application or "division." The divisional application should set forth the portion of the earlier disclosure that is germane to the invention as claimed in the divisional application.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 12 is drawn to a "...process for treating lameness that appears during osteoarthritis comprising administration, to a human or to a human or to an animal not suffering from arthritis..." if the process for treating lameness that appears in conjunction with osteoarthritis (which is synonymous with osteoarthritis) then the patient by definition must be suffering from arthritis. The examiner is treating claim

Art Unit: 1617

12 as a process for treating lameness that appears during osteoarthritis and not giving weight to the "...not suffering from arthritis...". Correction is required.

Claims 13-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Presently claims 13-20 recite "...process according to claim 28..." however there is no claim 28 present. As claim 12 is the only independent claim presented the examiner, in the spirit of compact prosecution, is treating claims 13-20 as being dependent on claim 12 and not claim 28. Clarification and correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12, 15, 17-18, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Breliere et al. (US Patent No. 4876248) and as evidenced by applicant's own admission.

Breliere et al. teach, in column 1 lines 5-15, derivatives of methylene-diphosphonic acid represented by formula (I), for use in the treatment of inflammation.

Art Unit: 1617

Breliere et al. teach, in example 9, the synthesis of Di-(tertiary butylamine) salt of (4-chlorophenyl)thiomethylene-diphosphonic acid (SR 41319) a salt of tiludronic acid (one of the currently exemplified and claimed compounds). Breliere et al. teach, in col. 22-IN VIVO Study, a rat animal model for rheumatoid arthritis wherein the animals were treated with 10mg/kg per day for 6 days to determine the efficacy of the compounds in the treatment of arthritis. In col. 23 lines 10-20, Breliere et al. indicate that the compounds exhibit low toxicity and can be used for the treatment of conditions due to inflammatory phenomena and in particular for the treatment of arthritic conditions anticipating the "...process for treating lameness that appears during osteoarthritis comprising the administration....of an effective amount of a bisphosphonic acid derivative selected from..." of claim 12, the "...process..comprising administration of 0.001 mg/kg to 100 mg/kg of body weight..." of claim 15, the "...process...comprising the oral administration of the bisphosphonic acid derivative" of claim 17, the "...process...comprising parenteral administration of the bisphosphonic acid derivative" of claim 18, and the "...process...in which the bisphosphonic acid derivative is 4-chlorophenylthiomethylenebisphosphonic acid" of claim 20.

The applicants state on page 6 lines 5-30, "It has also been possible to demonstrate the anti-inflammatory activity of certain bisphosphonic acid derivatives in a model of arthritis in rats, induced by injection of mycobacterium. However, the authors are unaware of any studies demonstrating the anti-inflammatory activity of these bisphosphonic acid derivatives in pathologies other than arthritis or more generally in other species (and for example in man). More recently, the value of certain

Art Unit: 1617

bisphosphonic acid derivatives in improving the repair of fractures has been described.

Reference will be made in particular to EP 600,834 or U.S. Pat. No. 5,488,041.

In another field, the use of bisphosphonic acid derivatives is also described in the diagnosis of certain bone complaints by scintigraphy. An example of such a use is reported by Keegan K. G., Wilson D. A., Lattimer C. L., Twardock A. R., Ellersieck M. R. (Am. J. Vet. Res., 1996, 57, 415-421) in the scintigraphic evaluation of <sup>99m</sup>Tc-methylene diphosphonate labelling of the navicular region in horses with lameness localized on the foot. However no mention is made of the clinical benefit provided by binding the bisphosphonic acid derivative in the bones of the palmar region."

By applicant's own admission bisphosphonates have been used in the treatment of arthritis, have been used for treatment of other bone disorders in humans, and have been used in the diagnosis of lameness in the navicular region of horses.

As a portion of the patient population treated for arthritis would have some degree of lameness and as the compounds disclosed by Breliere et al. are identical to the compounds in the currently claimed method of treating lameness that appear during osteoarthritis the lameness is inherently treated by the compounds of Breliere et al. in the general treatment of inflammation and in particular arthritis.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 1617

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 13-14, 16, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Breliere et al. as applied to claims 12, 15, 17-18, and 20 above, and further in view of Barbier et al. (US Patent No. 5488041).

Breliere et al. is as set forth above.

Breliere et al. does not specifically teach the treatment of horses nor the intravenous administration of from 0.1-1 mg/kg/week of tiludronic acid to horses.

Barbier et al. teach, in the abstract and in col. 3 lines 10-35, method of promoting bone repair in human or veterinary medicine which comprises the administration of a therapeutically effective amount of bisphosphonic acid derivatives (see Formula I). Said method is particularly suitable following a fracture or bone surgery. It includes the use of drugs containing at least one bisphosphonic acid derivative.

Such drugs can be used in human medicine and in veterinary medicine.

Such drugs can be administered by different modes of administration, for example orally, parenterally, transdermally or by means of an implant.

When a drug for oral administration is prepared, it is possible to use any suitable excipient and in particular an excipient which facilitates the absorption of the drug, such as sodium laurylsulfate.

The administration doses of the drug according to the invention depend on the bisphosphonic acid derivative used, the mode of administration and the magnitude of the desired effect on bone repair.

The drug administered according to the invention can be administered as a single or repeat dose. For repeat-dose administration, it is possible to choose daily continuous administration, 1 to 3 times a day, throughout the duration of the fracture repair (one to several months), or intermittent administration, for example 1 day a week for one to several months.

The dosage unit can comprise from 0.001 mg to 400 mg of bisphosphonic acid derivative(s) of formula (I), more particularly 0.01 mg to 400 mg.

Thus the administration doses of the drug prepared according to the invention can vary from 0.001 mg to 1.2 g per day, more particularly from 0.01 mg to 1.2 g per day.

The dosage unit preferably comprises from 0.1 to 250 mg of bisphosphonic acid derivative(s) of formula (I).

Barbier et al. teach in column 2 lines 25-30, that the preferred bisphosphonates are tiludronic acid and its pharmaceutically acceptable salts.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the compounds of Breliere et al. in the treatment of

Art Unit: 1617

lameness in horses as Barbier et al. disclose the same compositions suitable for veterinary use (encompassing horses) and the patient population treated by Breliere et al.'s method of treatment for inflammation and arthritis would encompass lameness and thus inherently treat said condition. The examiner respectfully points out the following from MPEP § 2112.01: "[T]he discovery of a previously unappreciated property of a prior art composition, or of a scientific explanation for the prior art's functioning, does not render the old composition patentably new to the discoverer." *Atlas Powder Co. v. Ireco Inc.*, 190 F.3d 1342, 1347, 51 USPQ2d 1943, 1947 (Fed. Cir. 1999). Thus the claiming of a new use, new function or unknown property which is inherently present in the prior art does not necessarily make the claim patentable. *In re Best*, 562 F.2d 1252, 1254, 195 USPQ 430, 433 (CCPA 1977).

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leonard M Williams whose telephone number is 571-272-0685. The examiner can normally be reached on MF 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreeni Padmanabhan can be reached on 571-272-0629. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
